## 计网 Lab2 实验报告 221220134 佟一飞

## 一、 程序结构与设计

首先是序号转换部分,分别实现了 64 位绝对序号转 32 位序号和 32 位序号转 64 位绝对序号。

64 位转 32 位只需截取低 32 位并加上起始 32 位序号:

```
Wrap32 Wrap32::wrap( uint64_t n, Wrap32 zero_point )
{
    // Your code here.
    return zero_point+(uint32_t)(n%(1ll<<32));
}</pre>
```

32 位转 64 位则首先找出和起始序号的差,然后找到离 checkpoint 最近的两个绝对序号,选其中离的更近的返回即可:

```
uint64_t Wrap32::unwrap( Wrap32 zero_point, uint64_t checkpoint ) const

// Your code here.
uint32_t tmp=raw_value_-zero_point.raw_value_;
uint64_t tmp1=tmp;
if(checkpoint<tmp1) return tmp1;
else{
    uint64_t cnt=(checkpoint-tmp1)/(1ll<<32);
    uint64_t ans1=tmp1+cnt*(1ll<<32), ans2=tmp1+(cnt+1)*(1ll<<32);
    if(ans2-checkpoint<checkpoint-ans1) return ans2;
    else return ans1;
}</pre>
```

然后是 TCP 接收者的 receive 方法和 send 方法。

1:

Receive 方法首先根据读入的 RST 设置字节流的错误位,然后如果有 SYN 则设置当前的 32 位序号为起始序号,然后向 Reassembler 输入字符串即可。输入字符串的起始下标为当前 32 位序号转 64 位序号的结果,checkpoint 为已经读入字节流的字节数加1,同时得到的 64 位序号如果当前不包含 SYN 则需要减 1 得到真正的起始下标:

```
void TCPReceiver::receive( TCPSenderMessage message )
{
    // Your code here.
    if(message.RST==1){
        rst=1;
        reader().set_error();
    }
    if(message.SYN==1&&!init) zero=message.seqno,init=1;
    reassembler_.insert(message.seqno.unwrap(zero,writer().bytes_pushed()+1)-1+(message.SYN),message.payload,message.FIN);
}
```

然后 send 方法返回字节流是否有错误,当前可以继续输入的容量以及请求的起始 32 位序号。当前可以继续输入的容量是 UINT16\_MAX 和当前字节流剩余容量的最小值,请求的起始序号是当前字节流已经读入的容量加 1,如果字节流已经关闭了则再加

```
TCPReceiverMessage TCPReceiver::send() const

// Your code here.
TCPReceiverMessage res;
if((rst==1)||reader().has_error()) res.RST=1;
if(writer().available_capacity()>UINT16_MAX) res.window_size=UINT16_MAX;
else res.window_size=(uint16_t)writer().available_capacity();
if(init){
   if(!writer().is_closed()) res.ackno.emplace(zero+(writer().bytes_pushed()+1));
   else res.ackno.emplace(zero+(writer().bytes_pushed()+2));
}
return res;
```

## 二、 实验结果

```
Start 16: wrapping integers cmp
15/29 Test #16: wrapping_integers_cmp .....
                                                Passed
                                                         0.02 sec
     Start 17: wrapping_integers_wrap
16/29 Test #17: wrapping_integers_wrap ......
Start 18: wrapping_integers_unwrap
                                                Passed
                                                         0.01 sec
17/29 Test #18: wrapping integers unwrap ......
                                                         0.01 sec
                                                Passed
     Start 19: wrapping_integers_roundtrip
18/29 Test #19: wrapping integers roundtrip .....
                                                Passed
                                                         1.65 sec
     Start 20: wrapping integers extra
19/29 Test #20: wrapping integers extra ......
                                                Passed
                                                         0.30 sec
     Start 21: recv connect
20/29 Test #21: recv connect ......
                                                         0.08 sec
                                                Passed
     Start 22: recv transmit
Passed
                                                         0.51 sec
22/29 Test #23: recv window .....
                                                Passed
                                                         0.02 sec
     Start 24: recv reorder
23/29 Test #24: recv_reorder .....
                                                         0.03 sec
                                                Passed
     Start 25: recv reorder more
24/29 Test #25: recv reorder more .....
                                                Passed
                                                         1.56 sec
     Start 26: recv close
25/29 Test #26: recv close .....
                                                Passed
                                                         0.02 sec
     Start 27: recv special
26/29 Test #27: recv special .....
                                                Passed
                                                         0.03 sec
     Start 37: compile with optimization
27/29 Test #37: compile with optimization .......
                                                Passed
                                                         1.04 sec
     Start 38: byte stream speed test
           ByteStream throughput: 0.77 Gbit/s
28/29 Test #38: byte stream speed test .....
                                                Passed
                                                         0.20 sec
     Start 39: reassembler speed test
           Reassembler throughput: 4.63 Gbit/s
29/29 Test #39: reassembler speed test .....
                                                Passed
                                                         0.24 sec
```
